Meyzieu, France

BAYARD and Calasys announce a strategic partnership between their two companies

French industrial actor BAYARD is acquiring Calasys, a technical and digital solutions integrator, with the aim of offering an enriched and integrated range of services to support the environmental transition and improve resource conservation management.

Faced with the major environmental and digital transformations of our time and to meet changing market needs, the two companies BAYARD and Calasys announce their mutual decision to join forces to nurture and accelerate their strategic roadmaps, based on shared values and commitments.

A strategic partnership project for BAYARD and Calasys

The acquisition project, which has been underway for several months, is in line with the strategic objectives of both companies, with the aim of benefiting from the strengths and assets of their new partner by mutually enriching their expertise.

More specifically, the alliance with Calasys will enable BAYARD to acquire an innovative partner to broaden its value proposition with intelligent products and solutions based on the use of data, in order to better meet the industrial and operational needs of its customers.

At the same time, the planned merger will provide Calasys with a growth driver capable of accelerating the development of its offerings thanks to BAYARD's network and sales force.

Through this new alliance, the two companies aim to develop new and expanded offerings in France and internationally, ranging from industrial design to intelligent monitoring, to help improve management of resource conservation (water, gas, etc.).

Shared commitments

The alliance between the two companies is also built around a foundation of shared values.

As players in the environmental transition, BAYARD and Calasys share a deep commitment to preserving resources, particularly water, a precious, essential and vital resource. By joining forces, the two companies are reaffirming their desire to work together for a future that is more respectful of the environment and future generations.

BAYARD and Calasys are both based in the Lyon region and share the same desire to play an active part in the region's economic dynamism. This responsibility reinforces the significance of the partnership between these two local economic players.

About BAYARD

Founded in 1881, BAYARD is a French industrial actor offering a wide range of products and services for the design, construction, operation and maintenance of water networks. Based in the Lyon region (Meyzieu, 69), the company currently employs 230 people. With a commercial presence throughout France and internationally, BAYARD's success is due above all to the attention it pays to customer satisfaction, the quality of the products it supplies and the strong commitment of its teams to the company's culture. Since 2023, BAYARD has been part of the Danish AVK group, giving it a solid financial footing and an international outlook.

About Calasys

Founded in 2002, Calasys is a technical and digital solutions integrator committed to the environmental transition. The company works with its customers in the water, district heating, gas and building sectors to improve existing installations, using innovative data management solutions for networks and infrastructures. More specifically, Calasys stands out for its strong internal culture of entrepreneurship and innovation, offering intelligent solutions that are resolutely forward-looking. A family business on a human scale, its 30 employees are highly agile in responding to customer needs. The company is based in the Lyon region (Rillieux-la-Pape, 69).
